Senior Software Engineer

Brief

We are seeking an experienced Software Engineer. The successful candidate will be responsible for designing, developing and implementing software solutions to address complex business issues, and providing technical leadership within the IT department.

The ideal applicant will able to thrive in a highly collaborative workplace and actively engage in the development process.

This is an excellent career opportunity for a professional with an impressive architectural design background and excellent interpersonal skills.

Responsibilities

- Design, develop and execute software solutions to address business issues
- Provide architectural blueprints and technical leadership to our IT & Development teams
- Evaluate and recommend tools, technologies and processes to ensure the highest quality product platform
- Collaborate with peer organizations, quality assurance and end users to produce cutting-edge software solutions
- Interpret business requirements to articulate the business needs to be addressed
- Troubleshoot code level problems quickly and efficiently

Requirements

- Master's degree in Computer Science or Computer Engineering is a bonus
- 3+ years' experience designing and building software applications
- Proficiency with PHP and Javascript
- Proficiency with cloud based services such as AWS or Google
- Experience working on complex software projects
- Knowledge of object oriented programs, SQL, web application development, security and open source technologies
