

Procura-se Monitor

Curso

Engenharia Civil

Disciplina

Desenho (assistido por computador, utilizando o Autodesk Revit)

Começar

5ª semana do semestre (semana do dia 2 de Março)

Horas

4 horas por semana durante 12 semanas

Candidaturas

Formulário disponível no secretariado do DME

For this semester we are looking for a '*monitor*' (teaching assistant) and if you have completed this discipline you are invited to apply for this position.

Tarefa

Your task will be that of guiding students during practical classes (*in Portuguese, obviously*). You have attended the classes yourself, so you have an idea of what it is like: students will be working on their project in the computer-room and you will be there to supervise them and answer any practical questions they have regarding the usage of Autodesk Revit.

Also, you will collect recurring questions and questions you do not have an answer to, so that we can attend those during the next lecture.

The students will get the assignment of modelling a building, similar to the assignment of last year. They will be working with the latest version of Revit (2009), which is very similar to the version used in the discipline last year.

This job, apart from the payment, will give you a good opportunity to gain more experience with Autodesk Revit and with teaching.

If you are interested, contact me by email or in my office: 2.83.
